 Title:
Perfect score:
 Total number of hits satisfying chosen parameters:
 Scoring table:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed.
 Score
 re greater than or equal to the score of the result bein is derived by analysis of the total score distribution.
 90.5
90.5

 The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

 The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
 Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequence from plant with nucleic acid or amino acid sequences from non-plant
 Sequence
 useful as herbicides.

 This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, a peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also used for the production of antibodies. The products can also be used detection and diagnosis.

The

and strains

invention relates to a library of DNA fragments of Escherichia ains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53904) of n D+A-. The polynucleotides have potential antiinflammatory,

nature

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling

 antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.

 associated with a plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant sequences comprising inputting sequence information selected from one of 464 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a modified trait, the method comprising selecting a polynucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress the polynucleotide or an antisense nucleic acid into an expression vector.
 the polypeptide or antisense nucleic acid, thereby producing a modification, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microb disease resistance, herbicide resistance, seed and fruit yield, grow rate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 proteins which
 sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant
 encoding an Arabidopsis thaliana transcription factor, their v complements, fragments, or related polynucleotide with 31% to

 The present invention provides the protein and coding sequences of proteins from Moraxella catarrhalis. These can be used to produce vaccines which protect against M. catarrhalis infection, which can otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a protein of the invention.

 acid). The invention provides M. catarrhalis BASB103-108

C polypeptides (see AAB1941-46) and polypucheotides (see AAA89212-17),

and methods for producing the polypeptides by recombinant methods.

C claimed vaccine compositions comprise a BASB103-108 polypeptide, or

a BASB103-108 polypucheotide for genetic immunization. A claimed

method for diagnosing a M. catarrhalis infection involves identifying

a BASB103-108 polypeptide, or an antibody immunospecific to a

BASB103-108 polypeptide, in a biological sample. Compositions

c comprising an immunologically effective amount of a BASB103-108

polypeptide, or a polypucheotide encoding it, are used to generate

an immune response in an animal. An antibody directed against a

C BASB103-108 polypeptide can be used to treat humans with M.

Catarrhalis disease. The polypeptides are also used as research

reagents for the discovery of therapeutics and diagnostics useful

in treating M. catarrhalis disease, especially antibacterial
